As to the enclosing walls, being not for support, they may be placed as boss at its centre. When the span of the. the architect pleases, either at the outer or inner edge of the buttresses. The one method, being that adopted by the French architects, gave to their interiors those deep recesses, whilst the other, or English method, served only to produce external play of light and shade. The Norman buttress resembles a flat pilaster, being a mass of masonry with a broad face, slightly projecting from the wall. They are, generally, of but one stage, rising no higher than the cornice, under which they often, but not always, finish with a slope. Sometimes they are carried up to, and terminate in, the corbel table. Fig. 1, Plate LVII. represents a buttress in two stages, with simple slopes as set-offs;...
