These meters are then read remotely via computer into the data acquisition system. 4. 4 Data Acquisition Figure 4. 4. Block diagram of data acquisition system. The basic data acquisition system is depicted in Fig. 4. 4 above. Data acquisition and analysis are automated by means of a desktop computer and customized software. Remote communication with the instruments in each detector enclosure allows a single computer to monitor both instruments ( in the transmitted and reflected beam paths ) simultaneously. The software allows for independent control of injection time, background measurement, and correction. Data analysis is performed real-time and is intended to allow for user interaction as a time-saving measure. The types of detectors ( energy, power, or calorimeter ) are selected by the user, and other static elements...
